Evolving technologies and data continue to change the practice of vascular surgery and vascular medicine. Innovations in medical therapies, treatment of complex aortic, carotid and peripheral artery disease merge with growing questions about durability and late events. Recent practice guidelines in aortic disease and chronic limb threatening ischemia reflect these ongoing tensions. The pandemic has further highlighted existing disparities in outcomes in vascular disease. Our 2021 symposium will bring many of the key issues to light in a fast-paced program including debates, interactive case discussions, and expert panels with an outstanding faculty. Please join us for an exciting educational event at the beautiful Silverado Resort in Napa, California.

GREENER MEETING
We’re saving paper! The syllabus will be available electronically one week prior to the course.

OBJECTIVES
Upon completion of this activity an attendee should be able to:

• Address the factors and techniques which will reduce failure rates of peripheral vascular interventions;
• Diagnose and treat aortic aneurysms by both open and endovascular techniques;
• Provide the optimal conditions for the healing of diabetic foot ulcers;
• Improve evidence-based medical management of patients with vascular disease.
